

Expertise and commitment for industry

TCS is able to tackle even the most complex projects, thanks to its substantial know-how and professional organization. Close cooperation with clients is a characteristic of all TCS work.

An international reference

TCS designs and constructs industrial infrastructure for large and small companies. The company was set up in 1975 and has grown into an international benchmark in three domains :

- Steel constructions

Design, engineering and assembly of steel constructions

- Cranes and Lifecycle Services

Design, engineering and installation of traveling cranes, gantry cranes and process cranes

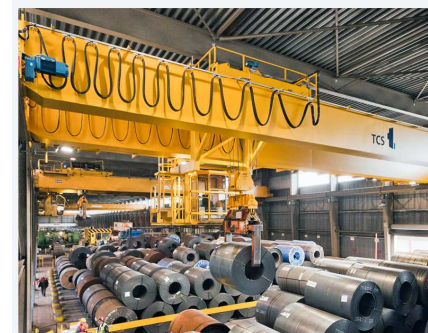

24/7 repairs, maintenance and renovation of cranes

- General Contracting

Turnkey completion of industrial infrastructure projects

Innovative solutions

Industry knows that it can call on TCS for even the most complex projects. TCS has developed a profound level of expertise over the past three decades. The engineering department is widely recognized for its innovative solutions for the manufacture of intricate steel constructions and hoisting equipment for difficult sites. TCS always collaborates closely with the client and the designer so that they can jointly select a solution that is affordable, technically feasible, and efficient to implement.
